

Web-Based Car Rental System for Handling Client Reservations and Vehicle Rental Management

User Manual

#1. User Login (Login.tsx)

- Open the Car Rental Management System.
- If you don't have an account, click Sign up here, fill in the required information, and click Register.
- Enter your Email Address and Password.
- Click Login.

#2. Choose car (cars.tsx)

- Select the vehicle you want to rent from the available list. The system will display the vehicle details, including the car model, rental price, and availability status before proceeding with the rental.
- Fill in the Pick-up Date and Return Date to specify the rental period
- For the payment method, users can choose between Cash on Pick-up or GCash as their preferred payment option. The selected payment method will be recorded as part of the rental transaction.
- Users can see the total rental amount based on the number of days they selected. The system automatically calculates and displays the total cost before confirming the rental.

#3. Bookings (MyReservation.tsx)

- Users can view their previous rental transactions through the My Bookings page. This section allows users to monitor their completed rentals and review important rental information.

Setup Instructions

- Put the folder in C:\Users\user\Downloads\carbook-master\
- Open phpMyAdmin and create database car_rental
- import the file .sql file.
- Open Visual Studio Code and open the CRUD folder. Right-click the folder, select "Open in Integrated Terminal," type **npm run dev** and press enter to launch the system.
- Go to the server folder, right-click it, and select "Open in Integrated Terminal." Type **node index.js** and press Enter to run the system server.
- Open a web browser and enter the URL **http://localhost:5173/** in the address bar. Press Enter to access the Car Rental Management System. The system login page will appear, allowing users to log in or create an account.
